SUPER SPHERE

At Sun Pipeline Solutions we are always developing solutions that meet your pipeline integrity constraints. The sphere solution we have developed is a unique sphere manufacturing process: pouring and making the spheres in one piece compared to two pieces bonded together. This process allows the spheres to be made without a seam eliminating concern over seam splitting or delaminating. It also permits valve bodies to be firmly embedded in the wall of the sphere to prevent leakage from around the valve.

Super Spheres use our MDI polyurethane which is proven for better flexibility, rebound memory, and abrasion resistance across a broad range of chemical and pipeline environments. Super Sphere, serious results.

➡ **AVAIL. FOR PIPE SIZES 2" - 42"**

APPLICATIONS

- Hydrostatic line testing
- Two phase flow operations
- Product batching
- Heavy cleaning
- Separation or the control of hydrate and distillate formation in natural gas lines

FEATURES & BENEFITS

- One-piece construction
- Solids, 2"-6" diameter
- Inflatable sizes, 6"-42" diameter
- Truer diameters for meter prover operations
- Filling and sizing inflatable spheres available
- Sizing rings available
- Ultra-strength LN-10 polyurethane
